

Wave Laminated Maple

Seating

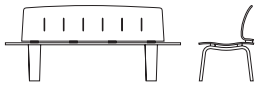

Wave Bench Laminated Maple

Furnishings
for
Public
Spaces

Nine plies of 1/16" thick laminated maple veneer are formed into the "wave" seat and back, creating a bench both distinctive and extremely comfortable. Pedastals are 1-1/8" thick. Suited for indoor use in a dry environment, it features the same horizontal slots as the steel version. The wood is finished with a sealer and lacquer, plus a stain if specified other than natural.

Natural characteristics of wood are allowed and kept to a minimum. Face grade veneer is a whole piece with no veneer patching, splice lines, open slits, or open defects. The color is uniform with no heavy contrasts. Check with the factory if you require more exact details. The bench may be shortened to 54" or 60" and up at an extra cost.

	Specifications	Model	L	D	H
	Laminated maple seat and pedestals, no back <i>This model is also available with steel legs: B321 A-HWS-7222</i>	B321 A-HWW-7222	72"	23.25"	16"
